

#GLITZCRYSTAL NAIL APPLICATION GUIDE

1. After finished color application, use **Glitz Twin Tips Brush** to apply **Glitz Condensed Glue Gel** to where the Crystals will be and DO NOT cure. Apply **Glitz Non Wipe Top Coat** using the floating technique over glue gel, DO NOT cure.
2. Use **Glitz Crystal Picker** to place Crystals onto the uncured **Glue Gel & Top Coat**. Use the other end of crystal picker to adjust the position of the crystals. Confirm crystal's position before curing. Wipe both sides of the nails to keep the shape nice. Cure 60 seconds under LED lamp.
3. Gently squeeze **Glitz Precision Glue Gel's** needle side to apply a small amount of glue in-between and around the crystals enough to cap the edges. Cure for 60 seconds.
- 4 Repeat Step 3 one more time or more if needed. This will make sure crystals don't come off. Do take note to never apply glue gel or non-wipe top coat over the crystals, as this will destroy the shine and beauty of the stones. Glitz Crystals will last up to 4 weeks when properly applied and wearing.
5. To remove the crystals, soaking the nail in professional acetone will do the trick.
