

## How To Prepare Your Brush For First Use

### **GEL BRUSH:**

1. Remove any packaging and protective covers from the brush.
2. Clean the brush with a gentle brush cleaner or alcohol. You can use a cotton pad or paper towel to wipe the brush until it's clean.
3. Dip the brush into a small amount of clean water to dampen the bristles.
4. Gently reshape the brush by running your fingers along the bristles to make sure they are aligned and straight.
5. If your gel brush is made of natural hair, use a brush conditioner to help keep the bristles soft and supple. Synthetic brushes don't require conditioner.
6. Your gel brush is now ready for use! Make sure to clean it after each use to keep it in good condition.

### **ACRYLIC BRUSH:**

1. Remove any packaging and protective covers from the brush.
2. Clean the brush with a gentle brush cleaner or soap and water. Use your fingers to gently rub the bristles and remove any residue or dust.
3. Rinse the brush thoroughly with clean water.
4. Gently reshape the brush by running your fingers along the bristles to make sure they are aligned and straight.
5. Dip the brush into a small amount of monomer (acrylic liquid) to dampen the bristles. Avoid letting the liquid touch the metal ferrule of the brush, as this can cause it to corrode over time.
6. Wipe the excess monomer off the brush using a lint-free cloth or paper towel.
7. Your acrylic brush is now ready for use! Make sure to clean it thoroughly after each use to keep it in good condition and prevent any acrylic buildup on the bristles.
